

Sondre Fagerli Øie
Senior Engineer
Drilling & Well
DNV GL

Lead Author / presenter.

Sondre Øie started working for DNV GL (formerly Det Norske Veritas) in 2008 after graduating from the Norwegian University of Science and Technology (NTNU) with a M.Sc. degree in organizational psychology. Since then he has delivered both technical and management consultancy to clients in various high-risk industries, such as rail, hydropower, and upstream petroleum. Service areas have ranged from safety culture and organizational change, to barrier management, risk analysis and human reliability. For the last couple of years he has been working mostly with offshore safety and major accident risk management. He has a particular interest in drilling operations and technology, with a focus on well control and integrity.

Sondre is one of DNV GL's representatives in the Petro-HRA project, a research and development initiative with an aim to adapt nuclear HRA methods for use in the petroleum industry.
